

Brookfield

VISCOSITY STANDARD

These fluids are intended for use as permanent viscosity standards. They are suitable for stockroom items under normal environmental conditions. These fluids are available in containers of nominal one-pint capacity, primarily intended for use with Brookfield Synchro-lectric Viscometers. All available standards are Silicone Fluids and are listed in the table below. The price covers the sample and a report containing accurate values for absolute viscosity at 25°C. Fluids should be ordered by the letter-number designation shown for each fluid: i. e. L-1, R-1, H-1.

The approximate viscosities of Brookfield Viscosity Standards are as follows:

Standard Fluid	Viscosity (Centipoises)
L-1	10
L-2	100
L-3	1,000
R-1	12,500
R-2	30,000
H-1	60,000
H-2	100,000

Price per STANDARD (1 pint)—\$13.75

Viscosity of any sample supplied will be accurate to within $\pm 1\%$ of stated viscosity value.

Shipment of any STANDARD can normally be made within two weeks after receipt of order. Information and prices of other Viscosity blends is available on request.
